Ontypology

- From difference to division, from division to type, from type to understanding – the brain has walked this path for aeons.
- A century ago, logic was philosophy; once seen clearly, it became an established science.
- Today we explore "Type" (a brain concept) as philosophy; Ontypology makes "Type" clear, turns it into an established science, and puts it into practice as Mind AI.

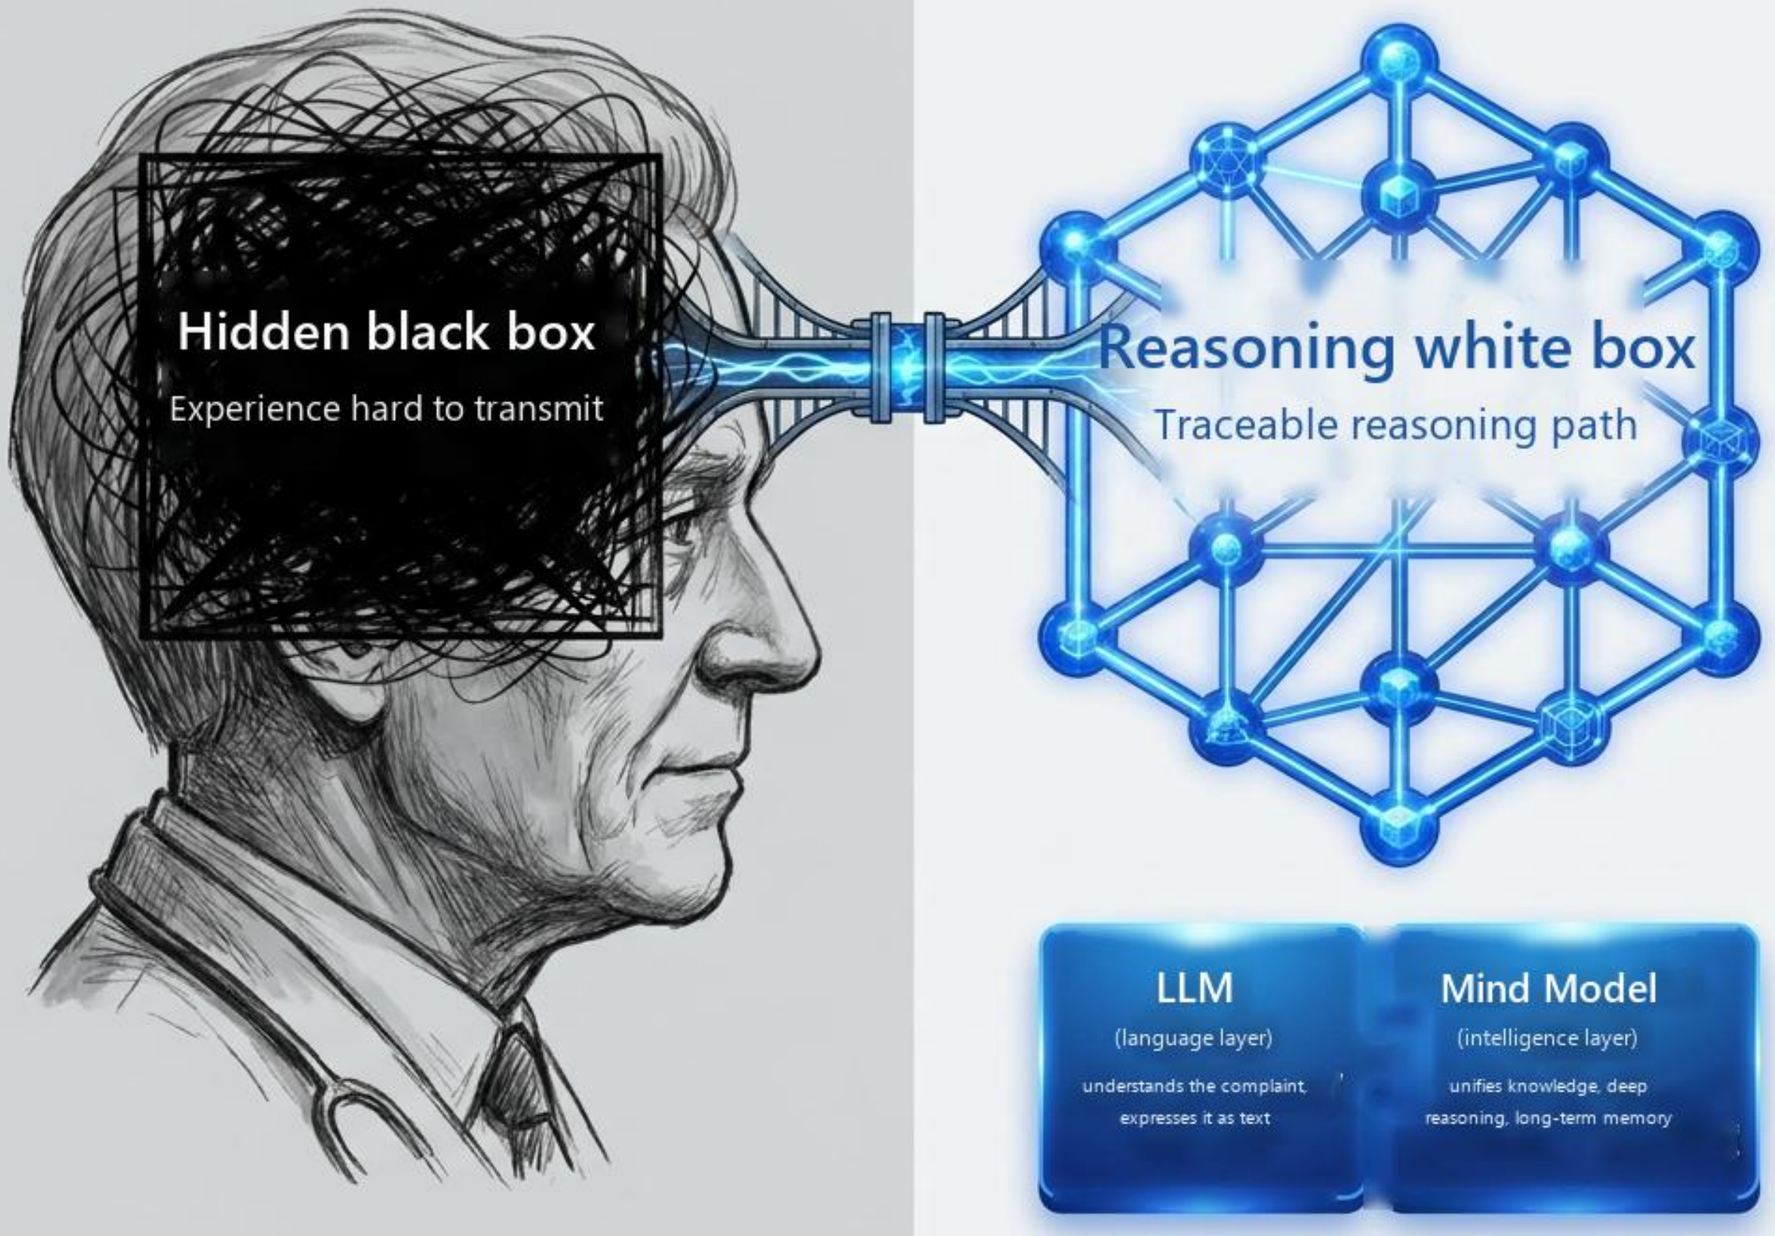

AI TCM consultation and prescription: the complete method

From the four diagnostics to follow-up prescribing — a reasoning replica (Mind AI × Ontypology)

Important notice: herbal content in this deck illustrates method only — not medical advice.

MIND AI

Language transfer matrix: medical reasoning ↔ Type and Number	
Four exams	Exam Type (ExamType): findings become fields
Differentiation	Syndrome Type (SyndromeType): feature set ∩(T)
Cause & mechanism	Mechanism Type (MechanismType): cause → mechanism → pattern chain
Treatment	Treatment Type (TreatmentType): one mechanism, one method
Prescription	Formula Type (FormulaType): sovereign–minister–assistant–courier BOM
Follow-up	Follow-up Type (FollowUpType): efficacy comparison and evolution

MIND AI

Type Form

Core convention: Type = Type

Space Type: pinning implicit medical logic onto a 3-D grid

Defining the BOM structure
(e.g. the {sovereign, minister, assistant, courier} task assignment of a formula)

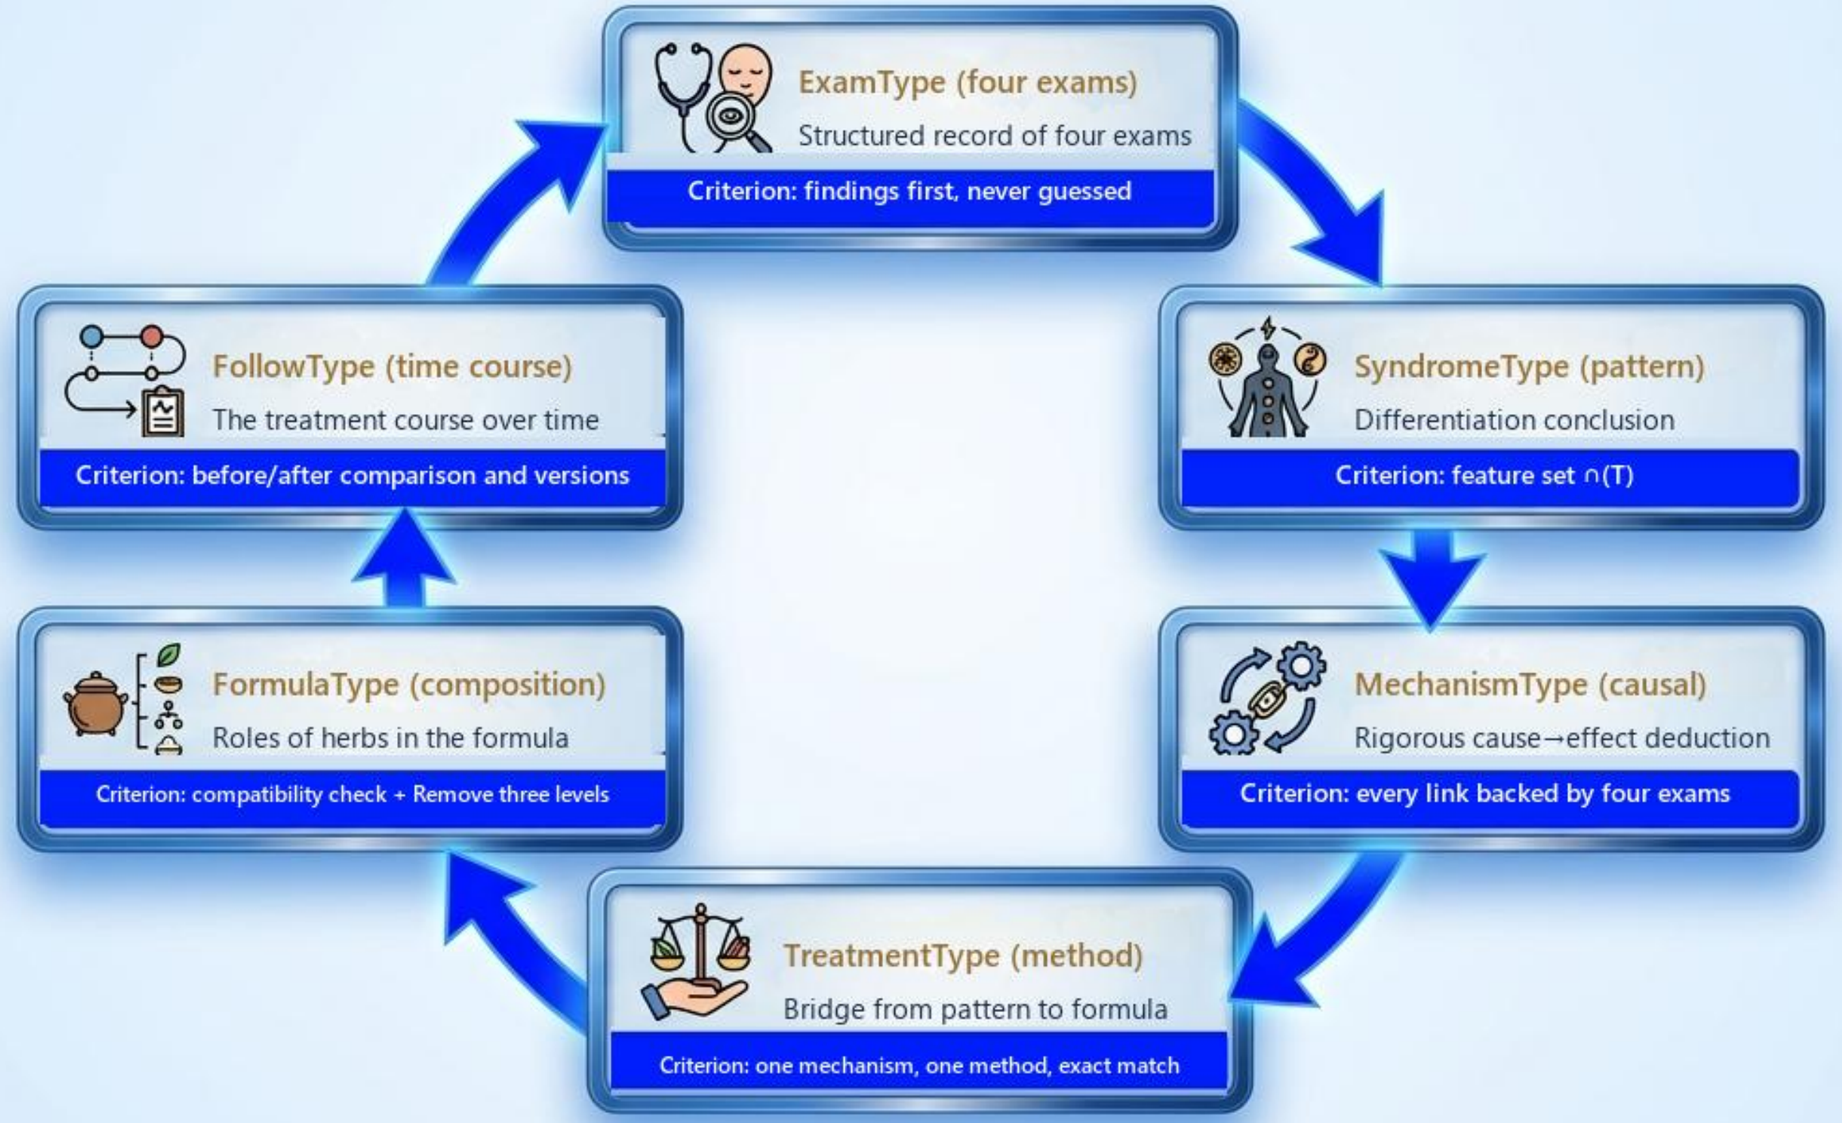

Defining property and qualification
(e.g. whether a feature enters the [insomnia] pattern)

Defining the BOM structure
(e.g. the {sovereign, minister, assistant, courier} task assignment of a formula)

Defining identity anchor id(C)
(e.g. Ms Lin's body container and this course)

MIND AI

Six output Types of consultation and prescribing (6-Types ecosystem)

MIND AI

Deep dive 1: findings first and the differentiation funnel

ExamType ⟶ SyndromeType

ExamType (four exams)

- Inspection: pale complexion
- Listening: faint voice
- Inquiry: insomnia, palpitations
- Pulse: fine, weak

Warning: objective findings first!
Tongue and pulse are mandatory;
gaps are flagged, never guessed.

Feature set F(T)

∩(T) unique-sign screening

Exclusion (bin)

Not liver-fire (no bitter taste, no wiry pulse)

Passed screening

Heart-spleen dual deficiency

MIND AI

Deep dive 2: the tightly interlocking mechanism chain and treatment bridge

MechanismType & TreatmentType

Core rule:

One mechanism, one method,
matched link by link.
Break the chain and the
treatment has no ground.

Bridge (TreatmentType method)

Tonify heart-spleen, nourish blood, calm spirit

Gear 1: cause

Excessive rumination

Gear 2: mechanism

Silent depletion of heart blood
spleen failing to transport

Gear 3: pattern

Heart-spleen
dual deficiency

Four-diagnostic evidence:

Inquiry: overthinking,
desk-bound work

Four-diagnostic evidence:

Palpitations, poor memory,
poor appetite and stools

Four-diagnostic evidence:

Pale face and tongue,
thready weak pulse

MIND AI

Deep dive 3: formula BOM disassembly and counterfactual stress test

FormulaType & Remove 3-Levels

MIND AI

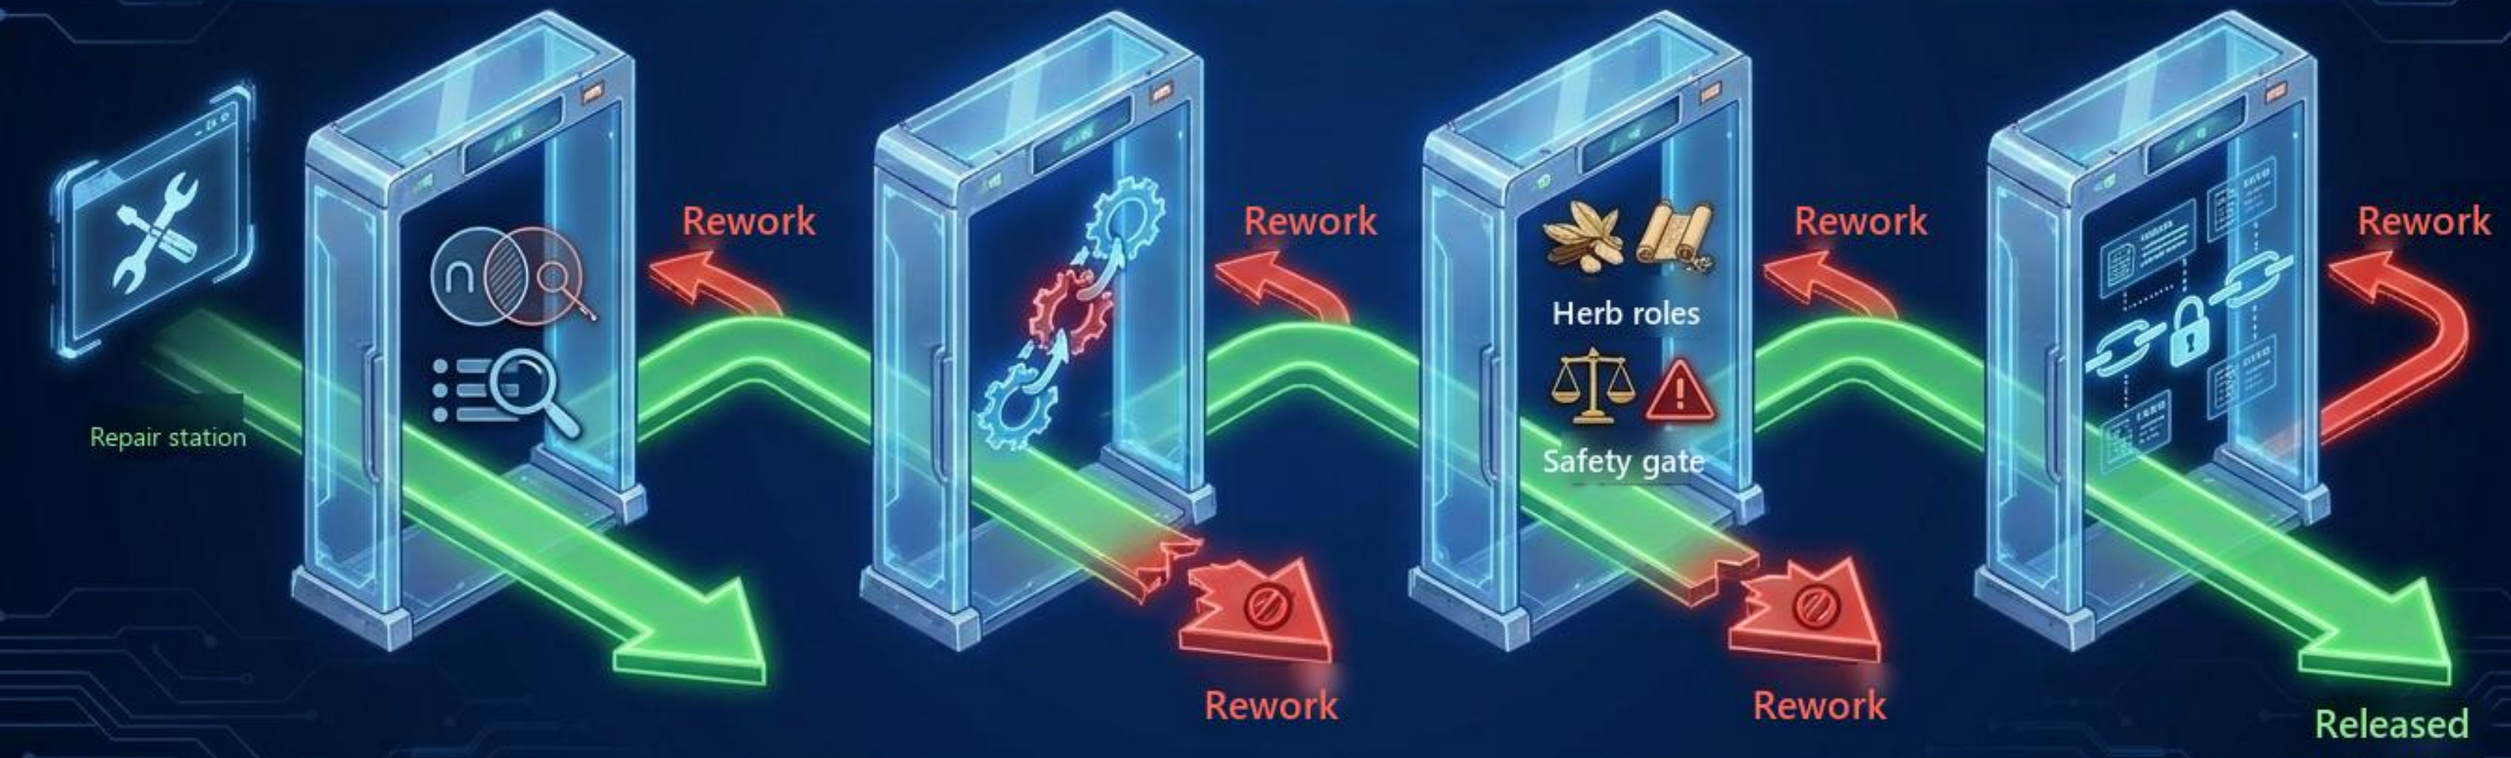

Accuracy cannot rest on feeling: a four-layer accuracy gate

Layer 1: ∩(T) criteria
Filter the feature set;
exclusions are mandatory

Layer 2: inference skeleton
Trace the cause chain;
check whether a link is broken

Layer 3: medical check
Structure: roles and tasks;
Safety: incompatibilities, dose

Layer 4: evidence chain
End-to-end traceability;
every step must have grounds

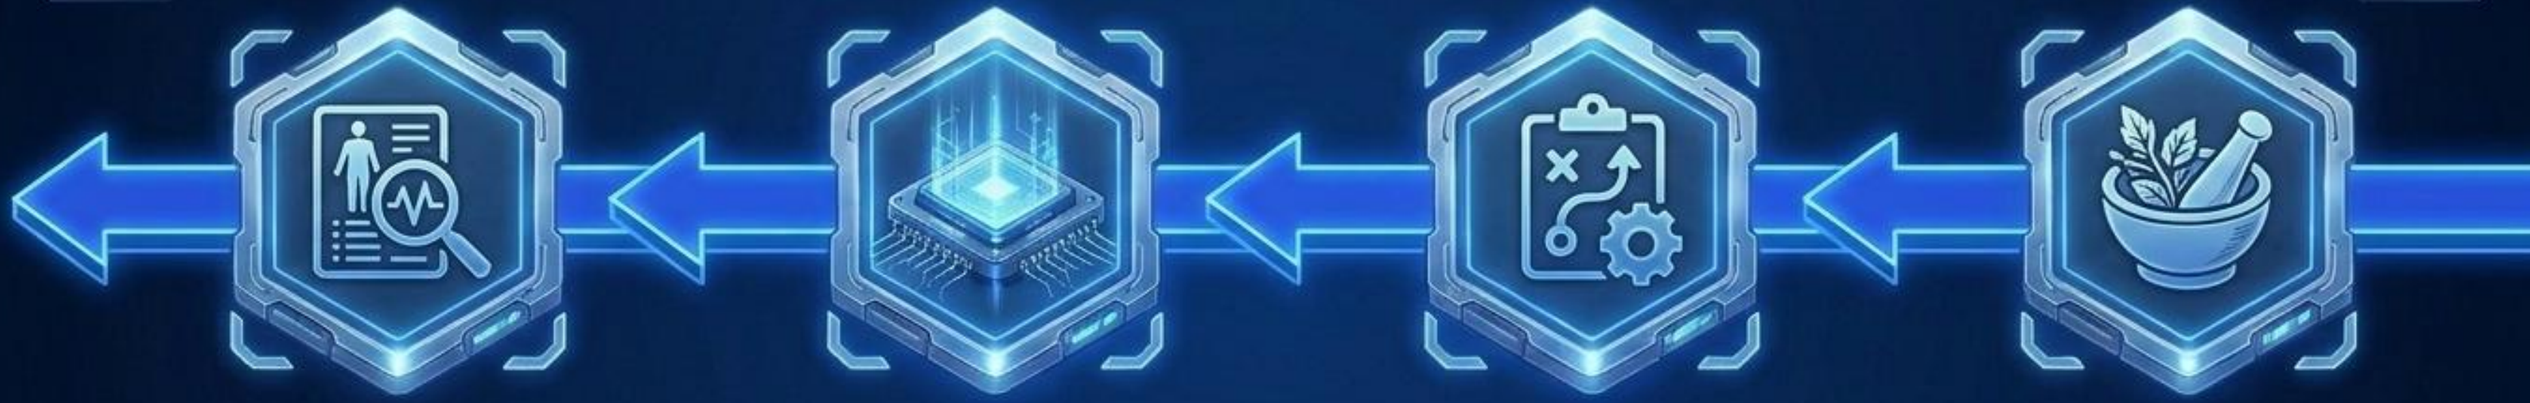

Never prescribe with doubts. If any gate fails, stop the flow at once and send it back.

MIND AI

Full traceback of the evidence chain (The Traceability Chain)

Every step must answer with the step before.

SyndromeType
On what grounds is this pattern set?

MechanismType
On what grounds is this mechanism inferred?

TreatmentType
On what grounds is this treatment set?

FormulaType
On what grounds is this herb prescribed?

Back to ExamType
(raw dialogue findings)

Back to SyndromeType
(matching pattern)

Back to MechanismType
(matching mechanism)

Back to TreatmentType
(matching task)

MIND AI

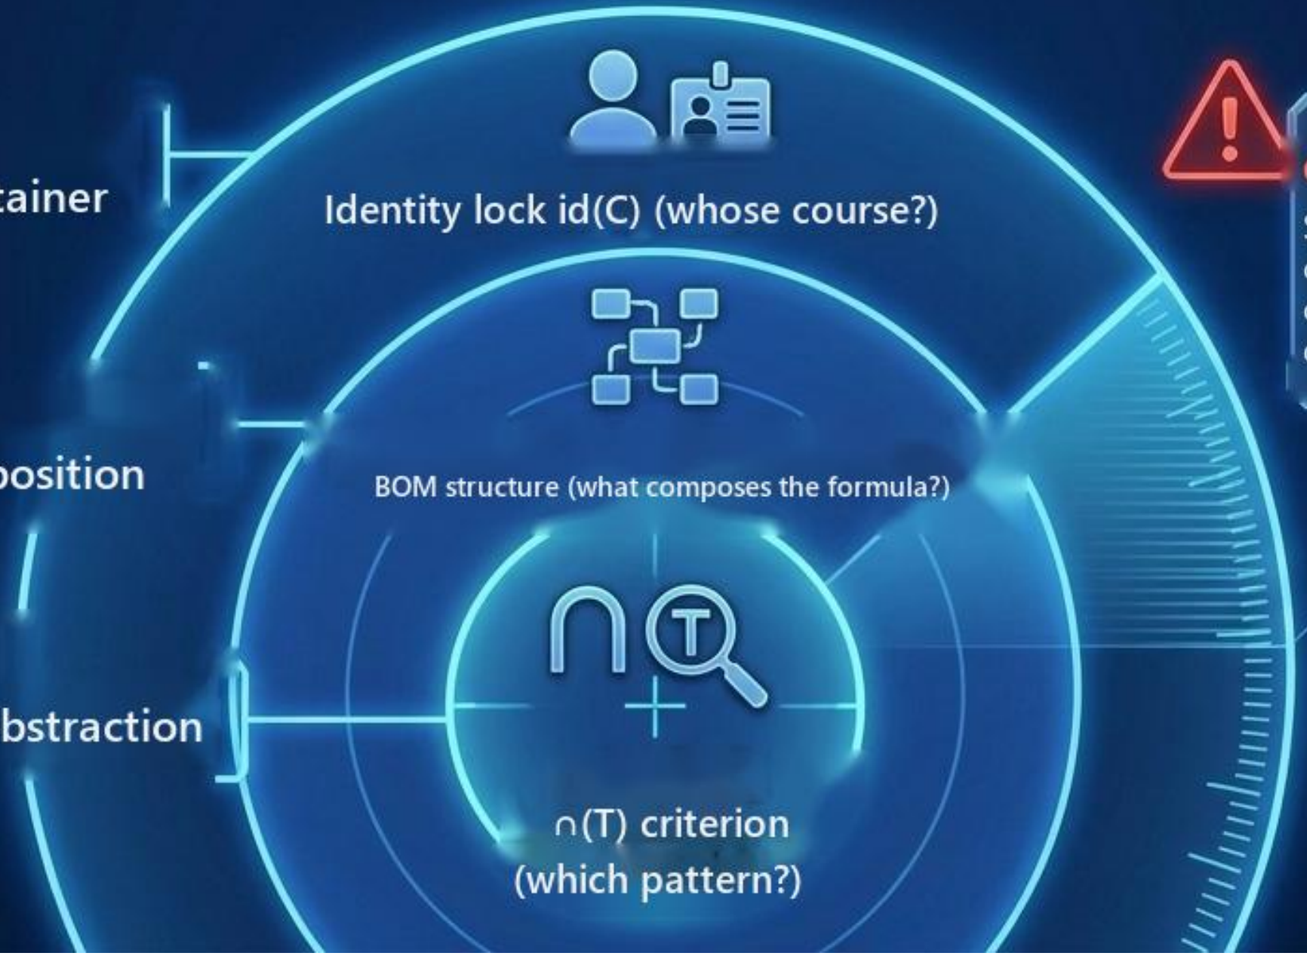

Before practice: six steps and three layers of logic

System startup: fix the object → fix the scope → fix the goal → fix the constraints

Outermost ring: () container

Middle ring: {} composition

Innermost ring: [] abstraction

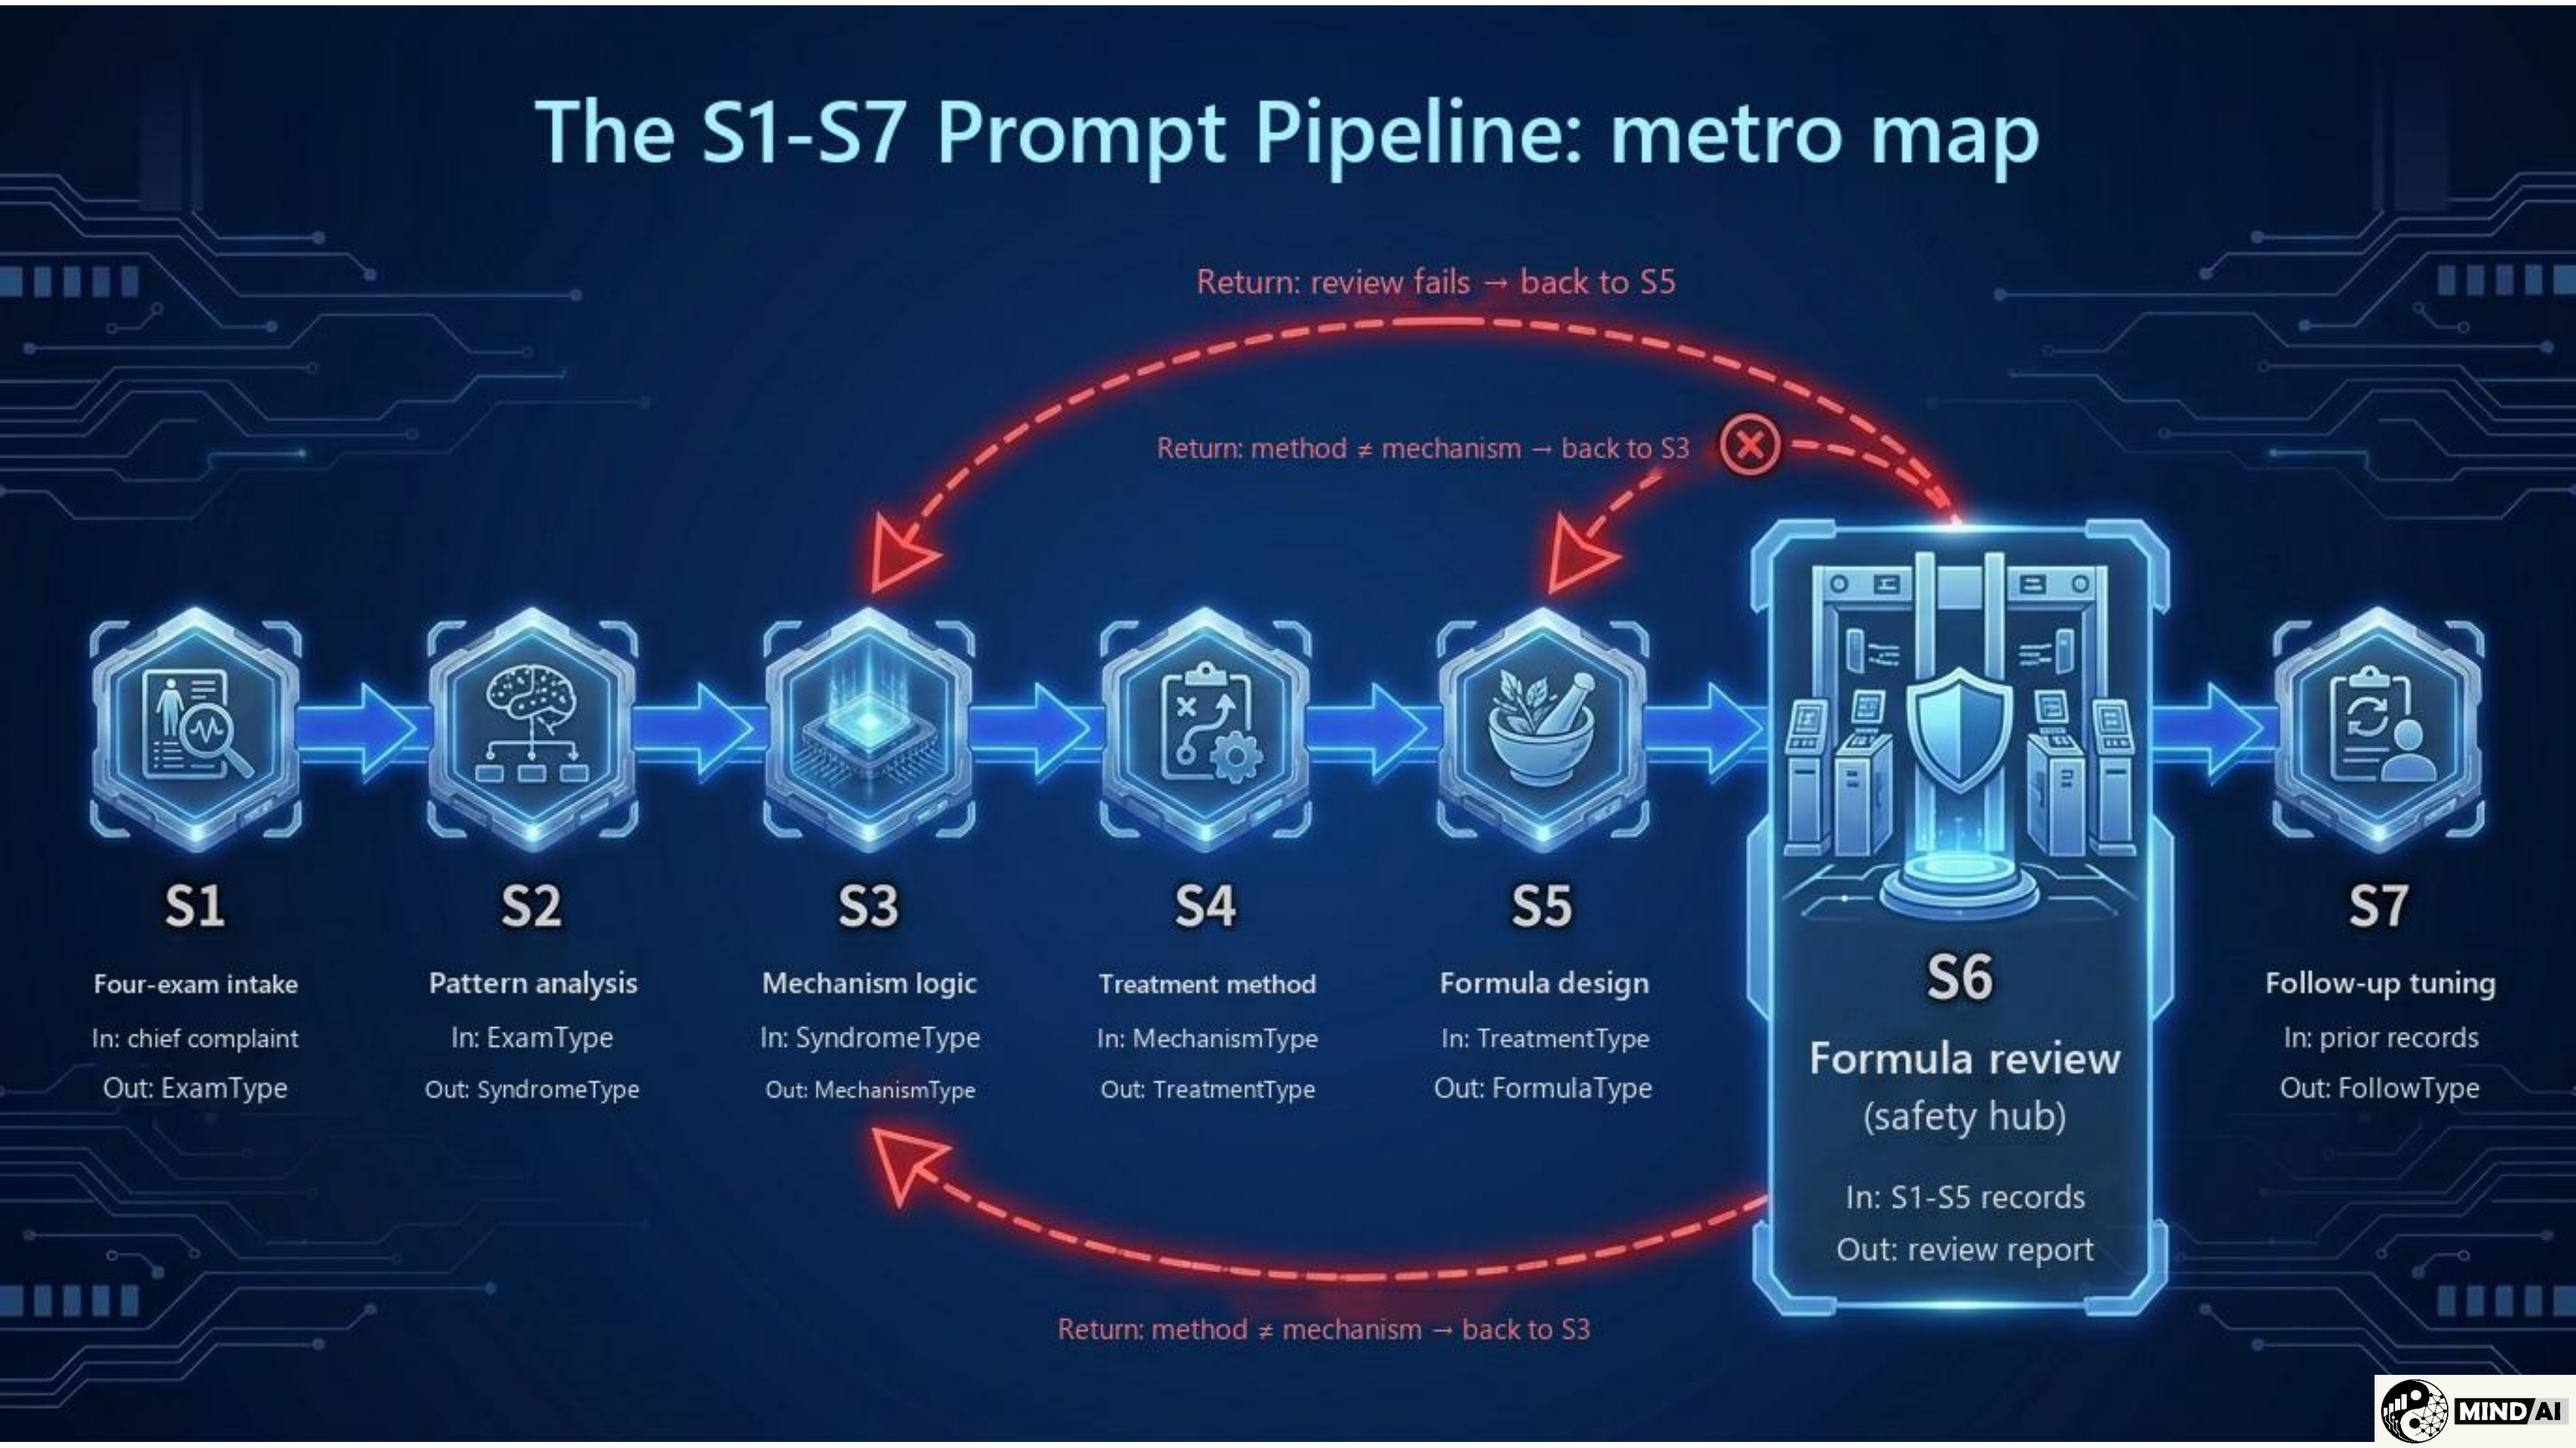

Operational warning:

Skipping layers is the main cause of blocks. Never skip container identity and deduce the abstract pattern.

MIND AI

The S1-S7 Prompt Pipeline: metro map

The S1-S7 Prompt Pipeline: metro map

Full case walkthrough (part 1): Ms. Lin's insomnia case (S1-S3 in practice)

Card 1: S1 Four-exam form (ExamType)

Chief complaint: insomnia for two months, palpitations, sallow complexion

Required exams: pale tongue, fine weak pulse

Consultation desk

Tongue & pulse exam

Pale tongue, fine pulse

Card 2: S2 Pattern form (SyndromeType)

Output: insomnia · heart-spleen dual deficiency

Radar chart vs. ∩(T) criteria

Note: exclude liver-qi stagnation turning to fire

Card 3: S3 Mechanism form (MechanismType)

Cause: excessive rumination

Mechanism: spleen fails to transport

Pattern: spirit loses nourishment

Four-exam evidence precisely aligned

MIND AI

Case walkthrough 2: prescription and follow-up (S5-S7 loop)

S5: FormulaType prescription slip

Base formula: Guipi Tang, modified

Name: | Date: | Rx No.:
Patient: | Pulse: | Fee:

[Monarch] Astragalus 15g, Codonopsis 12g, Ziziphus 15g

[Minister] Angelica 10g, Longan 12g, Poria 12g

[Assistant] Atractylodes 12g, Polygala 6g

[Envoy] Aucklandia 6g, Licorice 3g, Jujube, Ginger

Dynamic modification:

Add Biota seed 10g (task: calm the spirit; for excessive dreaming)

S7: FollowType timeline

Follow-up after two weeks

id(C) anchor update:
sleep improved,
palpitations reduced.

Decision: keep formula, 7 doses

Write back to case file
(experience evolution)

*Herb doses are for method demonstration

MIND AI

Field guide: misuse landmines and a prescription self-check

Five misuse landmines that lose the Form

1. **Prescribing before four exams**
   (evidence chain broken)

2. **Pattern fixed on one symptom**
   (∩(T) criterion ignored)

3. **Herbs added ad hoc to formula**
   (no BOM structure)

4. **Modifying with no rationale**
   (task left unmet)

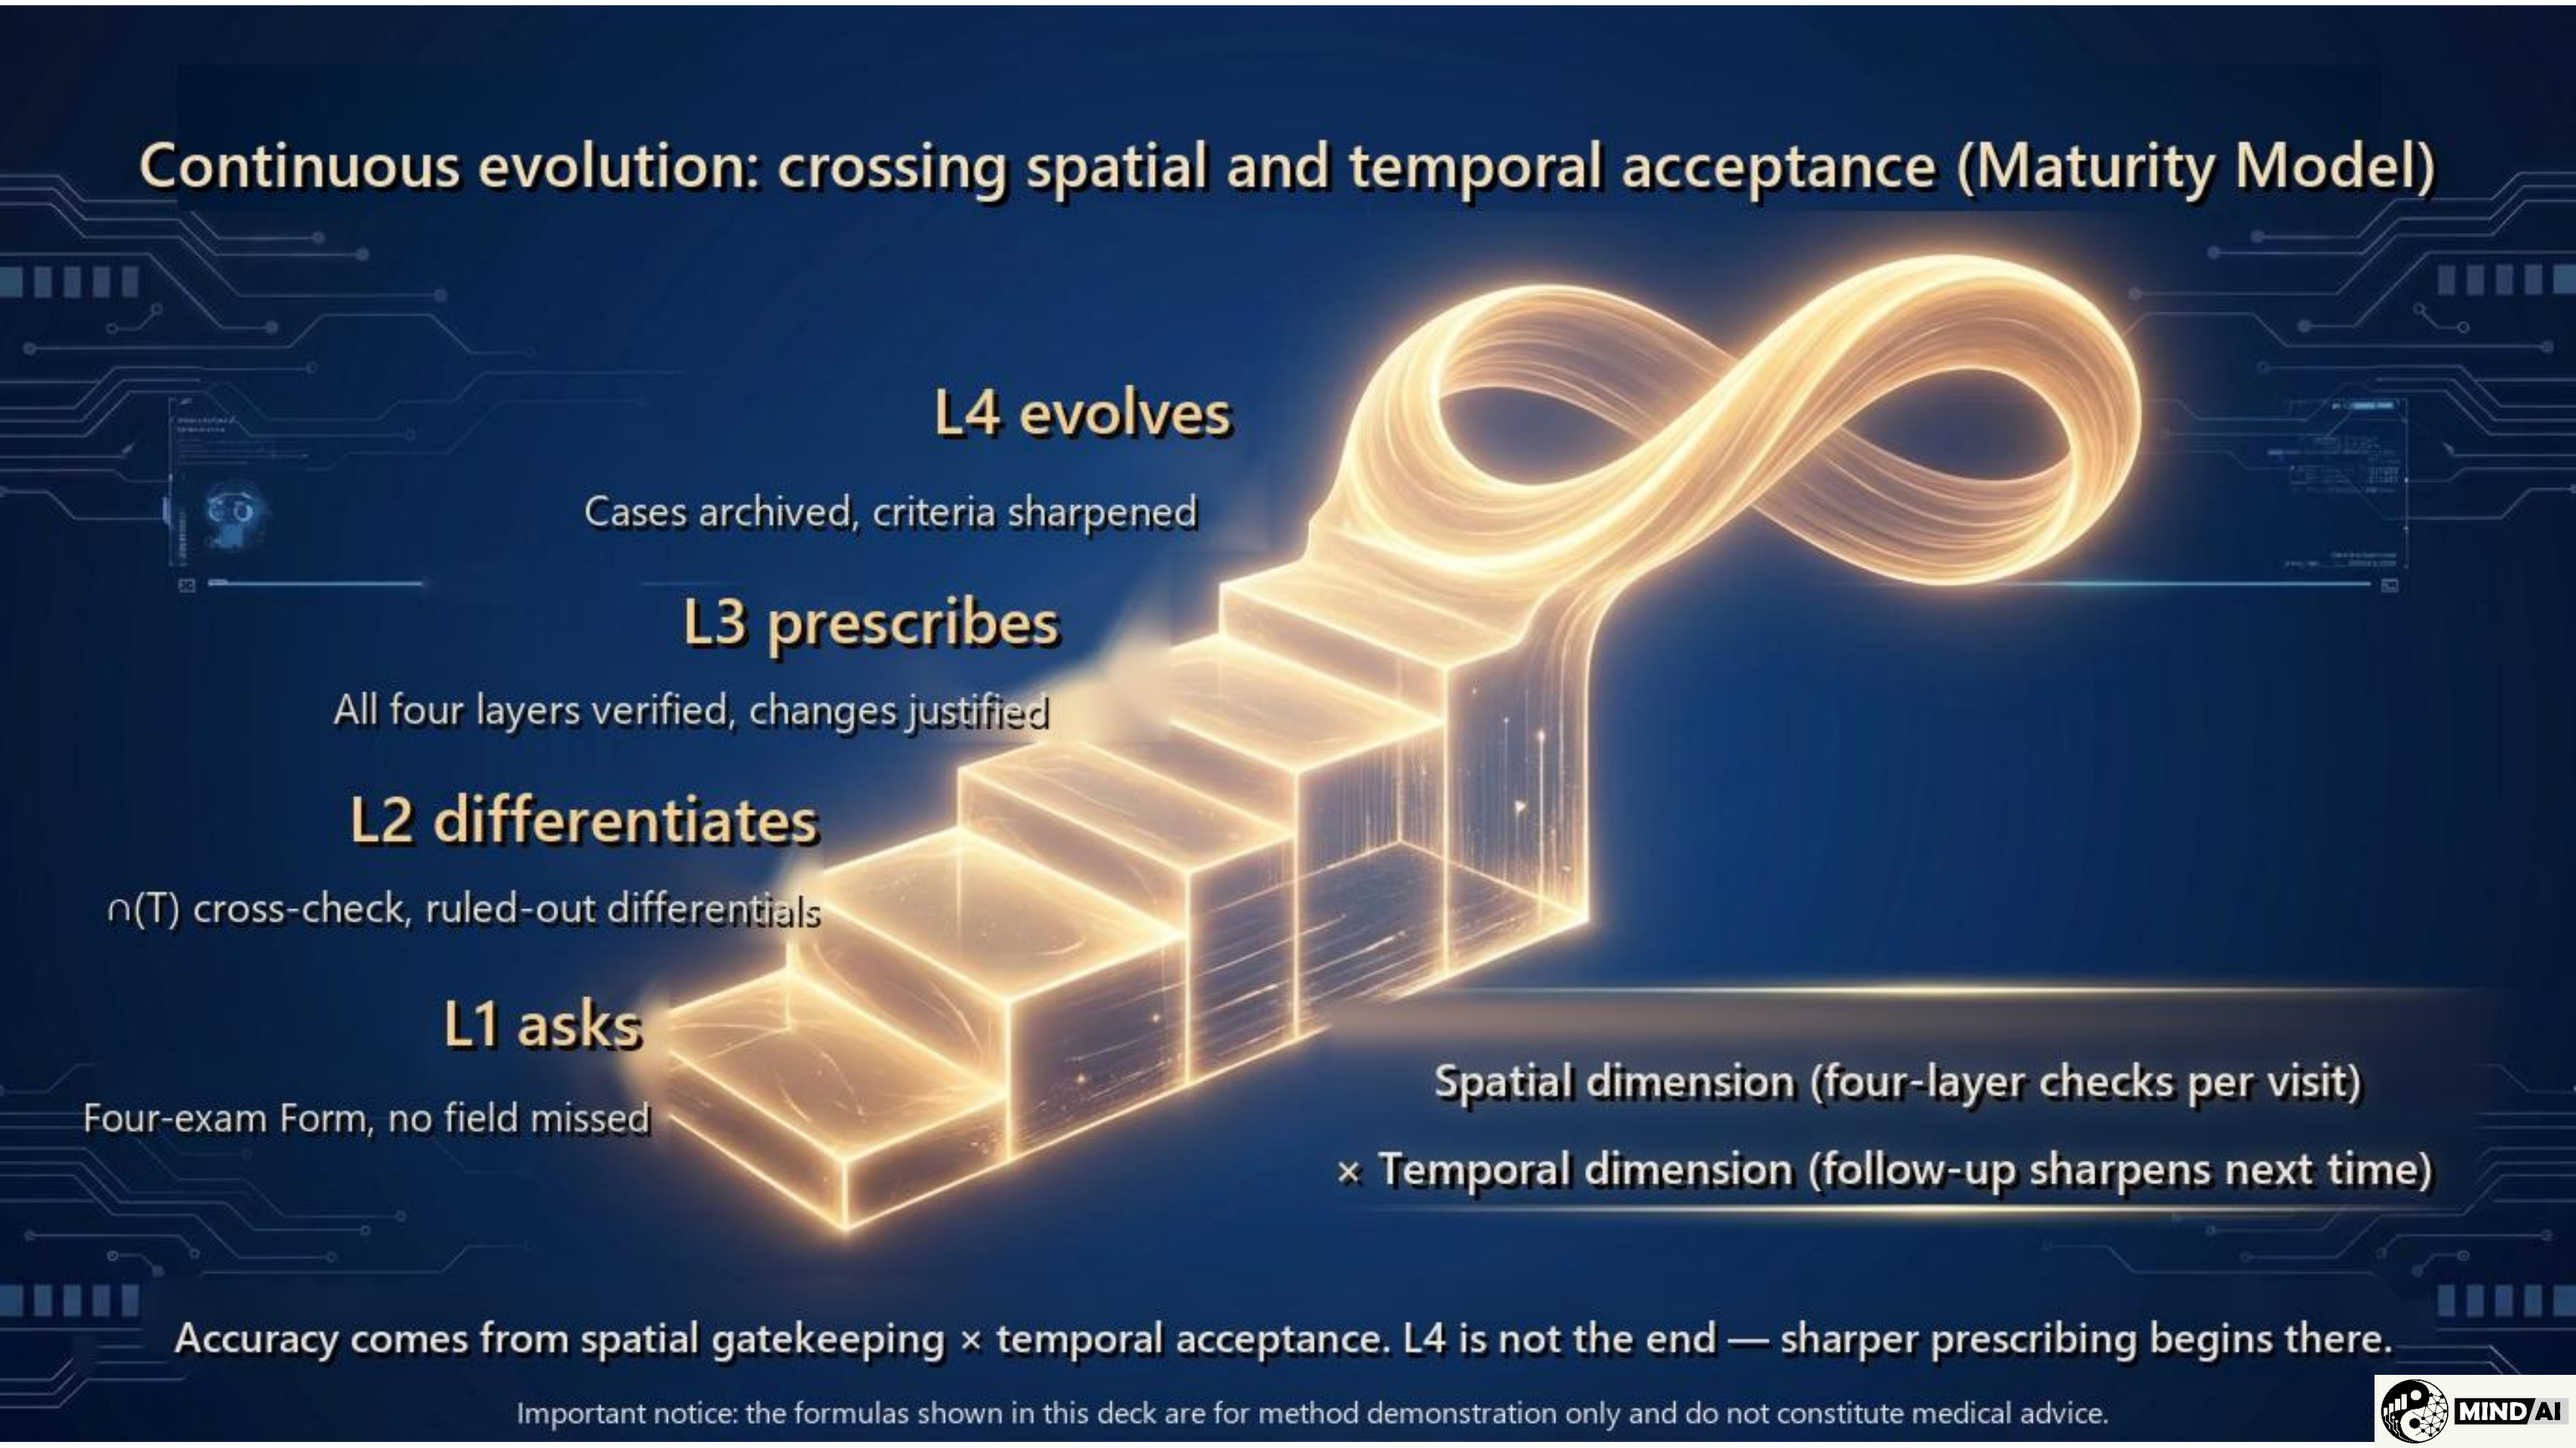

5. **Follow-up asks only "better?"**
   (no structured capture)

Before takeoff: core self-check list

- [ ] Tongue and pulse fields labelled?
- [ ] Differentials ruled out named?
- [ ] 18 clashes / 19 antagonisms checked?
- [ ] Each herb tied to the treatment?

MIND AI

Continuous evolution: crossing spatial and temporal acceptance (Maturity Model)

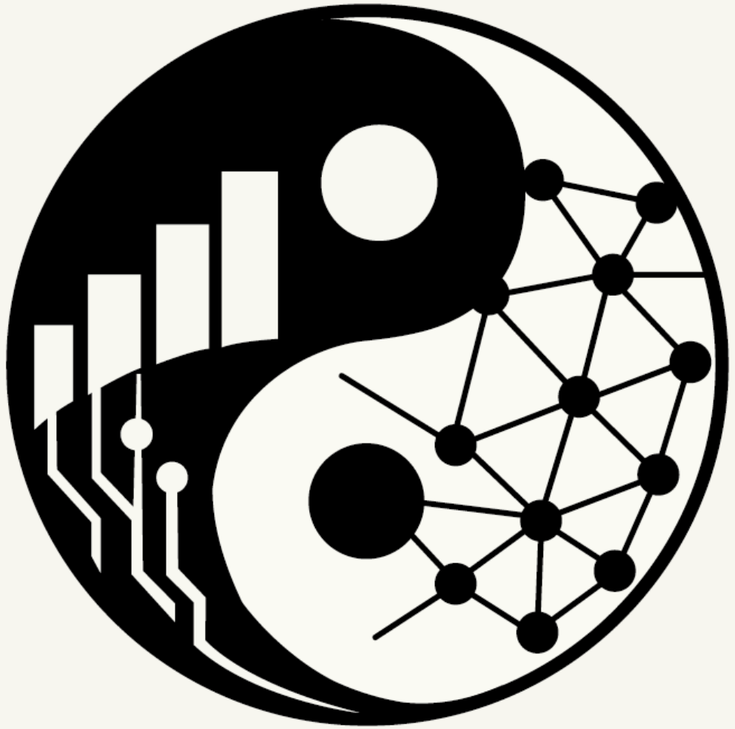

Accuracy comes from spatial gatekeeping × temporal acceptance. L4 is not the end — sharper prescribing begins there.

Important notice: the formulas shown in this deck are for method demonstration only and do not constitute medical advice.

MIND AI

LonGreat Vision: to create intelligent life that understands the essence of the world

MIND AI

"We aim to make artificial intelligence not merely a tool, but a system of intelligent life that truly possesses the abilities to understand, reason, learn, and create."

From the unification of knowledge, to the unification of thought, and finally toward the unification of intelligence – this is the eternal path to AGI that LonGreat pursues.
